

## Broken Golf Maze!

Have a go at playing this [Golf Maze Game](#):

Have you noticed that it doesn't work properly?! Can you work out why and debug the algorithms to get the game working properly?

Think about:

- how to control the ball...
- what should happen when the ball touches the hedges or the holes...
- what's missing from the algorithms in the program...
- which bits of code are not working properly...
- how you could make the program more efficient...

Here are *some* parts of the code which *might not* be working properly...

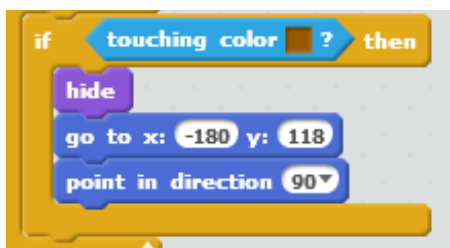

What's missing here? Why is that a problem?

What's going wrong here? What problem does this create?

What's missing here? Why is that a problem?

This is the chosen background. Could you improve it?

Top Tip! If you're finding this too tricky, why not play this [working version](#) first?
